for the Bachelor's Degree
in Management and
Computer Science!**

About Management and Computer Science

Innovative program aimed at training a new
leading class at the cutting edge of today's
digital revolution, answering specific demands
from national and international job markets.
MaCS combines strong quantitative skills in
computer and data science with the rigorous
thinking of economics and management,
blending traditional courses in economics,
entrepreneurship, law and statistics with a
significant presence of STEM topics, and
training students on algorithms, coding, artificial
intelligence, data management. Graduates
will be fully bilingual in digital and business.
The high percentage of foreign instructors and
students and the opportunity to spend the third
year abroad create a multicultural experience.
No background in programming or computer
science is required to enter the program.
